billview

Telecom Expense Management

BillView is a comprehensive online telecommunication asset management and bill reporting service.

Combining specialist bill interrogation processes and industry expertise this powerful, specialised service makes operational and financial management of all aspects of your organisations telecommunications assets, usage and expenditure :

Easy, Efficient & Effective

Taking the carrier provided billing information on a monthly basis the data is translated, standardised and recompiled into a series of billing specific relational databases. Accessible through a single source web based facility these databases are the foundation for an interactive, intuitive and feature rich reporting and management tool.

BillView provides extensive reporting capabilities with an intuitive and user friendly layout. This allows for unparalleled visibility and diagnostic capabilities, from a complete overview to an individual call and everything in between.

Coupled with expert independent support, the end result is a powerful and flexible reporting and management environment designed to provide ongoing cost savings and tight inventory control.
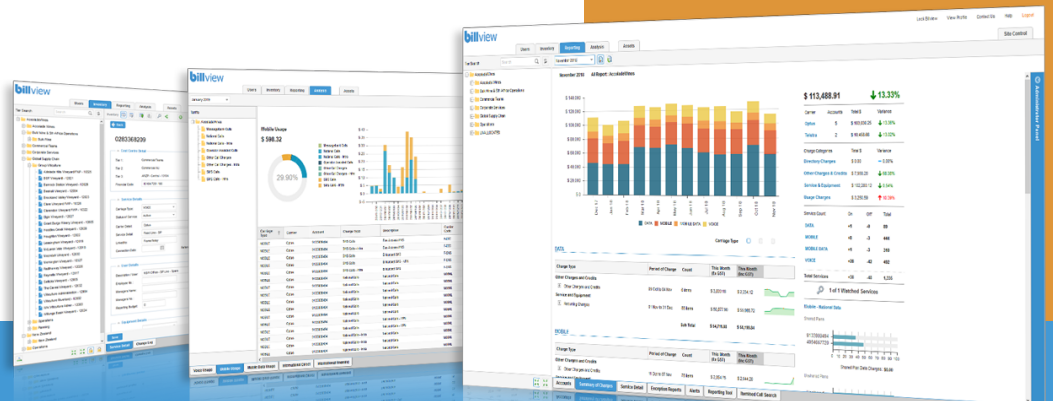

Telecommunication Auditing & Analysis

Ensure your organisation is receiving the charges, tariffs and discounts you are contracted to receive.

Supplied with your electronic billing information and telecommunications contract we can readily inform you if you are receiving what you should be.
